Topic: Terminal Emulation Support

AccuSpeechMobile Voice Productivity Reaches Broader Market with Seamless Voice-Integration with Georgia SoftWorks (GSW) Universal Terminal Server (UTS) for Windows and GSW Mobile Clients

Georgia SoftWorks' Universal Terminal Server for Windows is excellent for SCM applications inside or outside the warehouse, manufacturing and retail environments where wireless data collection is performed by RF terminals, RFID and barcode scanners and other mobile devices. With AccuSpeechMobile's tight integration with GSW Clients on the mobile device, any GSW customer application can be quickly voice-enabled delivering further increases in mobile worker productivity. The combination of GSW and AccuSpeechMobile mobile innovation makes voice productivity a practical and affordable productivity accelerator. The combined solution delivers all voice capabilities and application integration on the mobile device, avoiding any need to for any complex server-based integration.

AccuSpeechMobile Voice Interface for Leading Commercial Terminal Emulation Solutions Makes Simplified and Affordable Voice Productivity Possible for Mobile Workforces Across Your Supply Chain

The innovative AccuSpeech@Mobile voice solution makes voice productivity *scalable*, beyond the warehouse to any cross-enterprise mobile workforce application. Just one example of its 'scalability' is the mobile voice solution's support for terminal emulation access to thousands of existing VTAM/mainframe based mobile distribution, manufacturing, transportation and field service applications.

AccuSpeechMobile simplifies the integration of voice control capabilities to server-based applications, by enabling seamless voice functionality and application integration solely from your company's ruggedized devices and the wireless mobile terminal emulation solution accessing the mainframe application. This device-based voice solution completely eliminates the IT server, as the traditional costly and complex IT center of integration, making voice productivity a practical and affordable option for any supply chain application.

AccuSpeechMobile now provides a mobile interface between its Universal Voice Utility and the following commercial mobile terminal emulation solutions:
