

AccuSpeech *Mobile*

VF Corporation

VF Corporation (VF) is a leading wearing apparel manufacturer for clothing brands such as Lee Jeans, Wrangler, Nautica and North Face. The company chose Vanguard's AccuSpeechMobile solution to voice-power its high performance custom-built Ultra Picking and Static Picking applications.

“... they achieved productivity gains as high as 18%...”

Before adopting the Vanguard Voice device-based voice solution, this VF location assessed older pioneering server-dependent technologies and found the substantial investment and lengthy ROI could not deliver a sufficient increase in productivity for their already extremely efficient WMS.

According to the warehouse operations leader, *"the projected productivity payoff was simply not high enough to justify implementing a complex server-based IT voice layer offered by pioneering technologies, to our already highly efficient existing WMS system"*.

But with Vanguard's innovative full mobile device-based Universal Voice Utility they achieved additional productivity gains as high as 18%, with a short ROI, a faster, more efficient distribution cycle, and substantial cost savings.

Because of Vanguard's simplified voice-enabling solution, its effectiveness and affordability, these two applications are in production and are being piloted at other VF Corporation distribution centers supporting multiple wearing apparel divisions.
